

--Top Awards at the 19th Angel Investment Forum--

Calgary, 28/02/2006 (For Immediate Release) GrowSafe Systems Ltd. an innovator in advanced data solutions using Radio Frequency Identification (RFID), is pleased to announce that it took home top awards at the 19th Angel Investment Forum in Vancouver, BC, Canada held on February 27th, 2006.

"A few years ago when in R & D, we presented at our first Vancouver Angel Forum and received an honorable mention", said Camiel Huisma, President and Founder of GrowSafe. More importantly, we attracted investment from a successful Engineer/Entrepreneur. With his financial assistance, and significant business experience we have been able to double our valuation in two years, and gear up for product launch.

"Our 'stock' is rising", said Camiel. "Being voted the best opportunity in a field of 36 growth-focused companies; as rated by the 80+ investors that attended gives us great confidence. The additional recognition paid by the Toronto Stock Exchange in receiving their top award gives us further validation of the financial merit of our business proposition. This investor recognition follows closely on our selection as top Biotech exhibitor at the Canadian Financing Forum in November.

"It isn't easy raising money for a technology venture anywhere in North America. Alberta is a great place to have a business, but if you aren't in the energy sector it is difficult to find financing. Vancouver has an experienced; broad based financing community that has shown great interest in our AgTech venture. The Vancouver Angel Investment Forum gives a company a valuable opportunity to interact with high-caliber investors.

"We are delivering breakthrough results in feedlot automation Our technology enables highly practical, but previously unimagined ways of increasing efficiency, adding market value, and ensuring product safety. Simply put, our technology makes more money for our customers."

About GrowSafe Systems Ltd.

GrowSafe Systems Ltd. (GrowSafe) develops leading-edge RFID solutions for the agricultural research, fed cattle and dairy industries. A GrowSafe RFID system individually identifies animals with attached or implanted electronic identification tags. GrowSafe proprietary antennas and external sensors continuously acquire information about an individual animal's intake, behavior, health, and performance without direct contact or line of sight. GrowSafe software automates decision-making enabling predictive and real-time response across the enterprise. GrowSafe technology offers the livestock sector a new opportunity to monitor animal state of health, and determine animal performance and prevent the spread of disease.
